Prairie Creek Seed Non-GMO Statement 2020

Prairie Creek Seed has been and continues to be involved in organic and biological seed development and distribution. We encourage the continued improvement in seed hybrids and varieties that improve the quality and yield. Prairie Creek Seed is committed to finding the top of the line varieties while keeping the best interest of the farmers.

Currently, great strides have been made with organic corn hybrids for yield and agronomics, plus nutrition for livestock. Organically produced small grains and soybeans have been greatly improved and the offerings are more diverse.

However, forage and grass species have not achieved the same level of advancements in genetics. While a few of the varieties currently on the market are better than the commodity varieties most are not adapted to the Midwest and do not have the quality that is needed to assist farms in economic sustainability.

We strive to find the very best forages, grasses, clovers, and cover crops. The varieties Prairie Creek Seed selects are adapted to the Midwest and are tested in the United States for quality and performance. Prairie Creek Seed has, and will continue to, source and grow forages organically. Producing varieties at acceptable yield and quality standards for the price to be suitable to the current market has been difficult.

All varieties listed below were produced using traditional crossbreeding techniques. No genetically modified organisms (GMOs) were used in their production unless clearly marked and marketed as such. No pesticide seed treatments are used. The rhizobia legume seed inoculants are Prevail, Nitragin Gold or N-Dure. All are natural occurring rhizobial bacteria and are accepted inoculants. All varieties are untreated, or if a seed coating was used, the Non-GMO Statement, or OMRI listing will be attached.

Any of the products listed below at this time are either not available as certified organic production through Prairie Creek Seed or the organic version of the product is sold out. Please get in touch if you have any other questions. We would be happy to discuss any of this further.

Thank you,
Prairie Creek Seed
2020
