

Fleet Meadow Brome

Key Features

Fleet meadow brome is a long-lived perennial that is suited for dry land or irrigated pasture. Meadow brome can extend the grazing season as well as increase total forage production.

- High-yields and rapid regrowth
- Excellent season-long forage quality
- Suitable for hay or pasture

Applications

Haylage
Pasture
Dry Hay

Planting Time

Spring & Fall

Management Keys

Meadow Brome can be challenging for many livestock and hay producers. Typically this sod-forming grass has a shortened grazing or harvest window compared to other cool-season grasses. Since meadow brome spreads rapidly by seeds and rhizomes it can become increasingly dominant in pastures and paddocks. Boosting stocking rates in spring and fall and either moderate use or rotating away from brome grass during the summer will help year-round utilization.

Characteristics

Dry Hay	5
Persistence	3
Forage Quality	4
Baleage	4
Silage	3

Scale 1-5 (1 = Poor, 5 + Excellent)

Seeding Rate

New Seeding - 25 -35 lbs/acre
Overseeding - 10-15 lbs/acre

Seeding Depth

No deeper than 1/4"
