

# TETON II

Forage Tall Fescue

## Key Features

---

Teton II is a new generation, top yielding, and non-toxic endophyte free tall fescue variety. Teton II has excellent seedling vigor establishing quickly to create a healthy, high yielding and permanent pasture. Teton II is a deep rooted, medium maturing, variety with heat and drought tolerance. Teton II results in healthier more productive land and cattle

### A MOUNTAIN OF FORAGE

- Exceptionally High-Yielding
- Excellent Seedling Vigor
- Persistent Variety
- Heat and Drought Tolerant
- Endophyte Free
- Medium Maturity

### Applications

---

Pasture  
Haylage  
Dry Hay

### Planting Time

---

Spring & Fall

### Management Keys

---

Teton II is best suited to high fertility and heavy soils and can withstand acid, alkaline as well as poorly drained soils. Best growth is achieved during spring and fall seasons, with moderate growth during the summer season. Both endophyte free and novel endophyte varieties should not be over-grazed or harvested (closer than 5 inches) during the summer. First harvest of hay should be cut in the late boot stage for high quality. Subsequent harvests can be made as growth permits. Teton II can also be fall stockpiled for late feed. Teton II is highly palatable unlike Kentucky 31 so avoid over grazing. Graze at approximately 10-12 inches and remove animals when at 4-5 inches. As with any forage, management practices dictate the final yield and quality of the forage. With proper management practices, Teton II should provide high yielding, high quality forage that will result in improved producer profitability.

### Characteristics

---

Dry Hay	5
Persistence	5
Forage Quality	4
Baleage	4
Silage	4

Scale 1-5 (1 = Poor, 5 = Excellent)

### Seeding Rate

---

New Seeding 20-25 lbs/acre  
Overseeding 10-15 lbs/acre

### Seeding Depth

---

Plant no deeper than ¼"
