

TetraMag Hybrid Ryegrass

Key Features

TetraMag is an excellent hybrid ryegrass with exceptional yield potential and a stand-life expectancy of 3-5 years. It was the highest ranked entry in the Cornell University forage yield trial compared to other hybrid and festulolium varieties. It also ranked highest among experimental varieties in the University of Kentucky forage trial in its category. This yield potential is due in part to TetraMag's unparalleled seedling vigor. Once planted TetraMag paws at the ground to emerge and continues to produce all season long. In addition, TetraMag has improved forage quality.

A Magnum Forage Yielder:

- Exceptional Yield
- Excellent Seedling Vigor
- Improved Quality
- Persistent
- Cold Tolerant
- 3-5 Year Production

Seeding Rate

New seeding - 40-45 lbs/acre
Overseeding - 25-30 lbs/acre

Planting Time

Spring

Management Keys

TetraMag readily establishes on loosened bare soil or in close cut harvested fields for cover crop use. For typical new seeding applications apply at a rate of 40-45 lbs. per acre. For overseeding and cover crop use seed at a rate of 25-35 lbs. per acre for pastures and 3-5 lbs. per acre into thinning alfalfa stands. Use a Brillion seeder, a no-till drill or broadcast followed by a culti-packer. Seed to soil contact is critical to successful germination and establishment. For highest quality hay harvest at first boot stage.

Characteristics

Dry Hay	
Persistence	4
Forage Quality	5
Baleage	5
Silage	5

Scale 1-5 (1 = Poor, 5 = Excellent)

Seeding Rate

New seeding - 40-45 lbs/acre
Overseeding - 25-30 lbs/acre

Seeding Depth

Plan no deeper than 1/4"
